

Problem Set 4, Problem 0

Put your response to the reading below.

IMPORTANT: *Your entire response should fit on this page.*

Although it would be very beneficial to the human race to have technology be advancing as fundamentally positive force, I do not look forward to the future that he predicts. This is because one bad apple can spoil the bunch. This means that one person can use the technology for negative effects and it would be able to affect everyone, which would not be beneficial at all. Though he has been quite accurate in the past, I don't believe his predictions will come true, especially about computers becoming much better than brains. Not all of his predictions have come true first of all. Second of all, the brain is incredibly complex, processing information in ways that are still not understood. Though computers are much faster at computations than the human mind, I find it difficult to imagine a computer being able to replicate the way the brain processes information.
