Problem Set 5, Problem 0
Put your response to the reading below.
IMPORTANT: Your entire response should fit on this page.

I think that the drawback that you have to create new reusable functions if they don't exist still exists today. However, it is fairly minor as after you create the function, you are able to reuse it very easily. The idea that it takes up more time i think is not important nowadays. This is because computers are much faster compared to what they were in the past so the time that is lost is extremely minimal due to their incredible speed. I think that one of the major benefits that she does not mention in the article is that it makes it easier for people that are not programmers to understand how to use it. Rather than force every individual to create the program itself, the creation of functions make it so that people that are not familiar with the intricacies of programming can create their own program that is at least viable.
